

Using ICT to with Special Needs KS1

Learning Outcome s: Pupils will produce a personal profile of themselves using pictures.
They will use ICT to communicate information about themselves.

Activity:

Introduction: Teacher (or children) take digital photographs of each other. Use data projector to enlarge and display photos on screen and have whole class discussion of what we look like. Print out.

Main Session: SEN group will use Pick a Picture to select suitable pictures from bank given which represent themselves and their interests. When they have built up their profile this should be printed and attached to their photograph. *This needs to be demonstrated to them either by the teacher or the classroom assistant.*

Other children can write about and draw suitable pictures to illustrate themselves and their interests. This can be attached to photograph.

Plenary: Look at a few samples of work belonging to SEN group and ask other children what they can tell about the child from the picture profile.
